

Crime Risk and Location Intelligence

See local crime risk in context - across locations, over time, and against baseline expectations.

A more complete view of crime risk

Crime can influence site selection, asset protection, public safety planning, and investment decisions. STI: CrimeMetrics provides a consistent framework for comparing locations using modeled risk, local exposure, and annual trends - not just a single score or resident-population rate.

Estimated and Expected Crime

Estimated Crime represents reported patterns, while **Expected Crime** provides a comparable-area population-based baseline. Compare them to spot unusually high, low, or typical risk.

Looks beyond resident population

CrimeMetrics uses the **people, structures, and vehicles** present in an area to create more relevant crime exposure measures, especially in high-activity locations.

Annual history and five-year forecasts

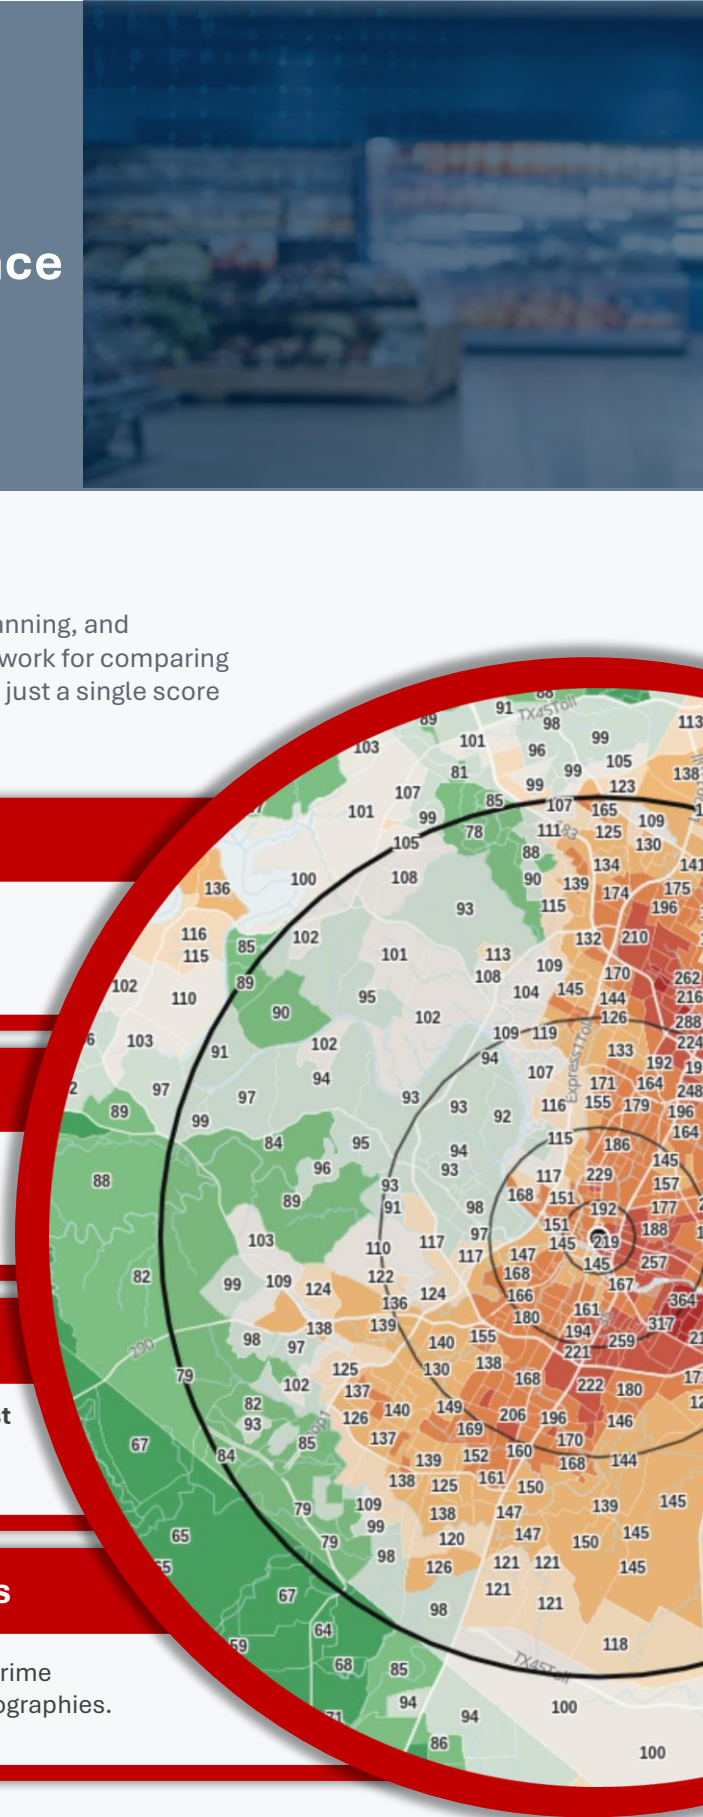

Review **annual history, a preliminary current year, and five forecast years** to support planning, budgeting, site decisions, and prevention strategies.

Detailed and comparable geographic measures

Access rates, indexes, percentiles, and Property, Violent, and Total Crime composites across block group, tract, county, state, and national geographies.

Put external crime risk into context

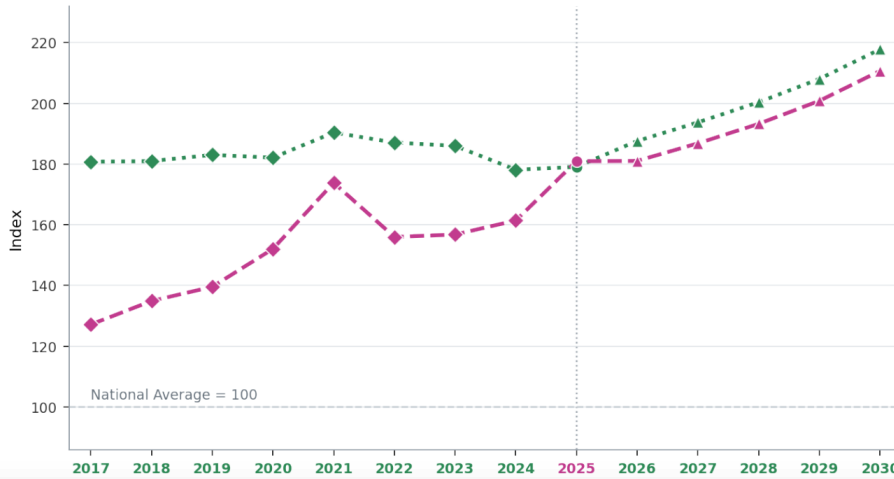

Combine STI: CrimeMetrics with internal incidents, shrink, store attributes, trade areas, or other Synergos demographic and market datasets.
